

Contracts for Difference Trading Risks and Disclaimer

Contracts for Difference (CFDs) are leveraged financial derivatives that carry a high degree of risk. The CFDs on BitYaris platform are available for multiple financial instruments including but not limited to cryptocurrencies, commodities, and forex and only a small amount considered as the initial margin amount is required to create a leveraged position and execute the transaction. Such positions have the potential to magnify gains or losses from a relative small market movement having an equivalent impact on your funds deposited with our eWallet services. In certain cases, your initial margin might get exhausted in the form of total losses and additional funds in the form of 'Mark-to-Market' losses might be required from you to be deposited with BitYaris eWallet to continue holding your leveraged position.

You should carefully evaluate the risks of trading in CFDs and understand the circumstance with respect to financial resources, trading knowledge and potential of losses before entering into a contract with counterparty. The CFDs are derivatives of an underlying asset and BitYaris offers trading in futures and CFDs of such underlying instruments and therefore, the trader is not entitled to any dividends or physical delivery of the underlying asset and the contracts will be cash settled at the time of expiry. Furthermore, CFD trading is a part of BitYaris platform and will be subject to the terms and conditions of the BitYaris Exchange.

Kindly ensure that you have understood all the information and disclosures on BitYaris account opening terms and conditions before commencing the trading activities on the platform.
